

# A1 Microsoft Specialist

## Scenario

Nel contesto attuale, caratterizzato da una crescente complessità delle soluzioni cloud Microsoft e dalla necessità di fornire supporto tecnico tempestivo e documentato, l'agente **Microsoft Specialist** rappresenta una svolta strategica, velocizzando un processo comune e ripetitivo.

Abbiamo identificato un problema concreto: la difficoltà nel reperire rapidamente informazioni ufficiali, aggiornate e affidabili, sia per il supporto interno che per quello rivolto ai clienti.

Un primo approccio utilizzato da molti utenti è porre la domanda nella Copilot Chat generale, ma questo produce un output buono nella maggior parte dei casi ma non ottimale:

## Richiesta Utente

Cosa sono le sensitivity labels in Microsoft Purview?

 Copilot 

Le **Sensitivity Labels** in **Microsoft Purview** sono etichette che permettono di classificare e proteggere i dati sensibili all'interno di documenti, email e altri contenuti aziendali. Servono per applicare regole di sicurezza e conformità in modo coerente, senza modificare il contenuto stesso.

Ecco i punti chiave:

### Funzioni principali

- **Classificazione:** Identificano il livello di sensibilità (es. *Confidenziale, Riservato, Pubblico*).
- **Protezione:** Possono applicare **crittografia, restrizioni di accesso e marcature visive** (es. watermark, intestazioni).
- **Persistenza:** L'etichetta rimane associata al file o all'email, anche se viene spostato o condiviso.
- **Automazione:** Possono essere applicate manualmente dagli utenti o automaticamente tramite regole (es. rilevamento di dati personali o finanziari).

### Integrazione

Le sensitivity labels funzionano con:

- **Microsoft 365 Apps** (Word, Excel, Outlook).
- **SharePoint, Teams, OneDrive.**
- **Endpoint** tramite Microsoft Defender.

Vuoi che ti prepari **uno schema visivo** che mostra come funzionano le sensitivity labels (classificazione → protezione → enforcement)?

Oppure preferisci **una tabella con i tipi di etichette e le relative azioni**?

**Fonti? Link? Formato Email-Ready?**

L'esperienza Copilot Chat di base è ottima per avere un rapido riscontro sul funzionamento delle tecnologie ma al momento ha diverse limitazioni operative, ad esempio:

- Per ottenere risposte di alta qualità bisogna **lavorare molto sulla scrittura del prompt**, recente *soft-skill* che pochi utenti aziendali al momento possiedono, e richiede del training.
- **Non sempre è chiaro da dove provengono le informazioni** riportate nella risposta, ed è cruciale saperlo quando si lavora, ad esempio, con tecnologie cloud in continua evoluzione. Non potendo controllare le fonti, aumenta il rischio di *allucinazione*.

- Spesso **gli utenti usano le risposte di Copilot per scrivere una mail** rivolta ad un cliente, rischiando di inviare informazioni non verificate e sprovviste di link a supporto. Inoltre, dopo un *copia-incolla* sono tipicamente richiesti alcuni minuti di lavoro per **formattare l'email** in un formato presentabile.

## Soluzione

La soluzione è stata lo sviluppo di un agente AI che interroga **esclusivamente il server MCP di Microsoft Learn**, garantendo risposte **verificate, conformi alle linee guida Microsoft**, e **supportate da citazioni dirette** alla documentazione ufficiale. Questo approccio elimina la generazione autonoma di contenuti, riduce il margine di errore e migliora la qualità del supporto tecnico.

La produzione di una bozza email con la risposta dell'agente è stata gestita tramite lo sviluppo di **tool dedicati**, in grado trasformare le risposte presenti nella chat in un'email professionale, opzionalmente abbellita da template e colori aziendali completamente personalizzabili.

Nella seconda parte di questo articolo è possibile trovare la descrizione di ogni strumento utilizzato, accompagnato da una guida per l'implementazione.

## Esempi di utilizzo

### 1) Richiesta di informazione generale su un prodotto

Anche in questo caso la scrittura di un prompt ottimizzato restituisce risultati migliori, ma è stata volutamente mostrata una semplice richiesta come "*What are sensitivity labels*", per mostrare come anche gli utenti alle prime armi possano ricevere risposte complete:

 Microsoft Specialist

# Learn about sensitivity labels

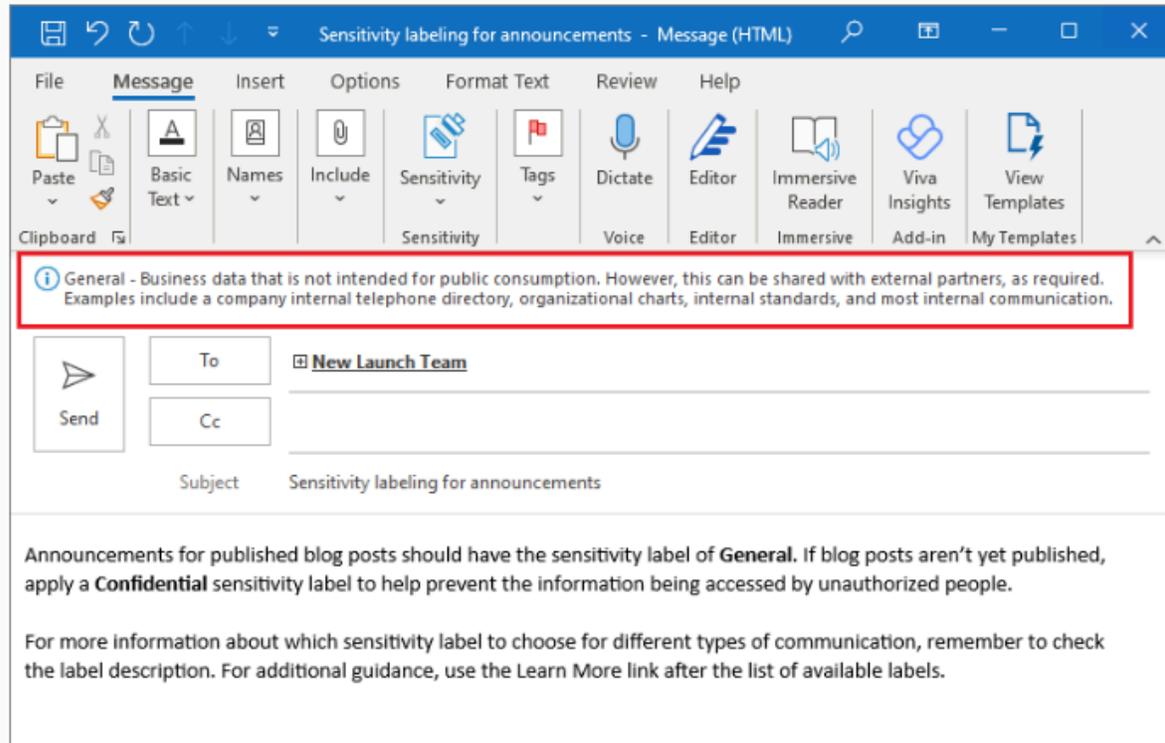

## What a sensitivity label is

When you assign a sensitivity label to content, it's like a stamp that's applied and is:

1. **Customizable.** Specific to your organization and business needs, you can create categories for different levels of sensitive content in your organization. For example, Personal, Public, General, Confidential, and Highly Confidential.
2. **Clear text.** Because a label is stored in clear text in the metadata for files and emails, third-party apps and services can read it and then apply their own protective actions, if required.
3. **Persistent.** Because the label is stored in metadata for files and emails, the label stays with the content, no matter where it's saved or stored. The label identification that's unique to your organization becomes the basis for applying and enforcing policies that you configure.

When viewed by users in your organization, an applied sensitivity label appears like a tag on apps and can be easily integrated into their existing workflows. Your sensitivity labels aren't visible in apps to users from other organizations, or to guests.

The following example shows an opened email where another user has applied the sensitivity label named **General**, which doesn't apply encryption. The label description supplied by the admin displays more detail to users about the category of data identified by this sensitivity label.

Each item that supports sensitivity labels can have a single sensitivity label applied to it from your organization. Documents and emails can have both a sensitivity label and a [retention label](#) applied to them.

[Read more on MS Learn](#)

Would you like an email with this information?

## 2) Bozza email con contenuti

Una volta ottenuta la risposta in chat, l'agente chiede all'utente se vuole un'email con le informazioni condivise. Accettando, l'agente invia una mail all'indirizzo dell'utente con tutte le informazioni intatte, comprese di link di approfondimento, tabelle ed immagini (se presenti):

Quick steps Read / Unread Copilot

## What are sensitivity labels?

Summary by Copilot

Hello Luca Pagliari,  
Here is the information you requested:

### Learn about sensitivity labels

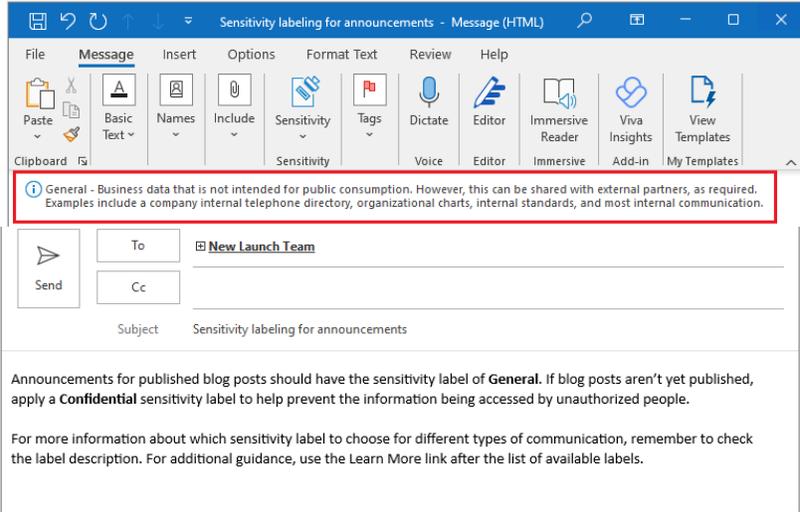

#### What a sensitivity label is

When you assign a sensitivity label to content, it's like a stamp that's applied and is:

- Customizable.** Specific to your organization and business needs, you can create categories for different levels of sensitive content in your organization. For example, Personal, Public, General, Confidential, and Highly Confidential.
- Clear text.** Because a label is stored in clear text in the metadata for files and emails, third-party apps and services can read it and then apply their own protective actions, if required.
- Persistent.** Because the label is stored in metadata for files and emails, the label stays with the content, no matter where it's saved or stored. The label identification that's unique to your organization becomes the basis for applying and enforcing policies that you configure.

When viewed by users in your organization, an applied sensitivity label appears like a tag on apps and can be easily integrated into their existing workflows. Your sensitivity labels aren't visible in apps to users from other organizations, or to guests.

The following example shows an opened email where another user has applied the sensitivity label named **General**, which doesn't apply encryption. The label description supplied by the admin displays more detail to users about the category of data identified by this sensitivity label.

**Note**  
Don't confuse sensitivity labels with Outlook's built-in [sensitivity levels](#) that indicate the sender's intention but can't provide data security.

Each item that supports sensitivity labels can have a single sensitivity label applied to it from your organization. Documents and emails can have both a sensitivity label and a [retention label](#) applied to them.

For more details, see: [Learn about sensitivity labels](#)

Reply Forward

Questa bozza potrà essere usata, con minime modifiche, per essere inviata ad un cliente o un collega.

### Nota sulla lingua

In questo caso è stato scelto l'**inglese** come lingua di base perché, anche senza Copilot, **consultare la documentazione in lingua italiana è sconsigliato**. Specificandolo all'agente, è possibile ricevere una mail tradotta nella lingua desiderata.

## 3) Richiesta più specifica con tabella comparativa

Anche in questo caso il prompt non è elaborato ma viene richiesto espressamente il formato dell'output, in particolare una *tabella di comparazione*:

## Microsoft Specialist

Created by Luca Pagliari

Fammi una tabella contenente una matrice delle feature contenute nelle seguenti licenze: Entra ID Free, Entra ID P1 ed Entra ID P2

### Microsoft Specialist

Here is a feature comparison matrix for Microsoft Entra ID Free, Entra ID P1, and Entra ID P2, based on official Microsoft Learn documentation:

Feature	Entra ID Free	Entra ID P1	Entra ID P2
Conditional Access	No	Yes	Yes
Multi-Factor Authentication (MFA)	Yes (basic)	Yes	Yes
Dynamic Group Management	No	Yes	Yes
Role-Based Access Control (RBAC)	Yes (basic)	Yes	Yes
Self-Service Password Reset	Yes (cloud users only)	Yes	Yes

Richiedendo la mail di riepilogo, **la struttura a tabella viene preservata**:

Entra ID Free, P1, P2 Feature Matrix

Summary by Copilot

Here is a feature comparison matrix for Microsoft Entra ID Free, Entra ID P1, and Entra ID P2, based on official Microsoft Learn documentation:

Feature	Entra ID Free	Entra ID P1	Entra ID P2
Conditional Access	No	Yes	Yes
Multi-Factor Authentication (MFA)	Yes (basic)	Yes	Yes
Dynamic Group Management	No	Yes	Yes
Role-Based Access Control (RBAC)	Yes (basic)	Yes	Yes
Self-Service Password Reset	Yes (cloud users only)	Yes	Yes
Application Proxy	No	Yes	Yes
Identity Protection	No	No	Yes (includes risk-based Conditional Access)
Privileged Identity Management (PIM)	No	No	Yes
Access Reviews	No	No	Yes
Entitlement Management	No	No	Yes
Identity Governance	No	No	Yes
Single Sign-On (SSO)	Yes (limited)	Yes	Yes

For more details and the full list of features, please refer to the official Microsoft Learn documentation:

- [Microsoft Entra ID license comparison](#)
- [Microsoft Entra service description](#)

Last verified: 2025-10-16

## 4) Richiesta di carattere tecnico con pezzi di codice

Uno dei maggiori casi d'uso di Copilot per un utente tecnico è quello di ottenere programmi PowerShell già pronti da utilizzare. In altri casi si lavora in una nuova macchina e si cerca una rapida guida per installare gli strumenti di lavoro. Negli esempi seguenti è possibile trovare entrambi gli scenari:

Give me the PowerShell script to block the Microsoft 365 Group creation in my tenant

### Microsoft Specialist

To block Microsoft 365 Group creation in your tenant using PowerShell, you can use the Microsoft Graph PowerShell module to set the "EnableGroupCreation" setting to false. Below is an official script from Microsoft Learn:

```
1 Install-Module Microsoft.Graph.Beta.Identity.DirectoryManagement
2 Import-Module Microsoft.Graph.Beta.Identity.DirectoryManagement
3 $params = @{
4     TemplateId = "62375ab9-6b52-47ed-826b-58e47e0e304b"
5     Values = @(
6         @{
7             Name = "EnableGroupCreation"
8             Value = "false"
9         }
10    )
11 }
12 Connect-MgGraph -Scopes "Directory.ReadWrite.All"
13 New-MgBetaDirectorySetting -BodyParameter $params
```

Can you provide also a guide on how to install Graph in a new machine?

### Microsoft Specialist

Here is a step-by-step guide from Microsoft Learn on how to install the Microsoft Graph PowerShell SDK on a new machine:

## Install the Microsoft Graph PowerShell SDK

### Prerequisites

- PowerShell 7 and later is recommended for all platforms.
- For Windows PowerShell:
  1. Upgrade to PowerShell 5.1 or later.
  2. Install .NET Framework 4.7.2 or later.
  3. Update PowerShellGet to the latest version using:

```
1 Install-Module PowerShellGet
```

## 5) Invio di mail contenente multiple risposte

In molti scenari, come il precedente, all'interno della stessa chat si ottengono diverse risposte iterative. Fortunatamente, l'agente è in grado di legare tutti gli argomenti trattati in una chat e formulare una singola mail con le informazioni condivise:

For the full official guide and troubleshooting, visit:

<https://learn.microsoft.com/en-us/powershell/microsoftgraph/installation?view=graph-powershell-1.0#installation>

Would you like to receive this information by email?

Great, bundle all those information and send them by email

Here is the information you requested:

## PowerShell Script to Block Microsoft 365 Group Creation

To block Microsoft 365 Group creation in your tenant using PowerShell, use the Microsoft Graph PowerShell module to set the "EnableGroupCreation" setting to false:

```
Install-Module Microsoft.Graph.Beta.Identity.DirectoryManagement
Import-Module Microsoft.Graph.Beta.Identity.DirectoryManagement
$params = @{
  TemplateId = "62375ab9-6b52-47ed-826b-58e47e0e304b"
  Values = @(
    @{
      Name = "EnableGroupCreation"
      Value = "false"
    }
  )
}
Connect-MgGraph -Scopes "Directory.ReadWrite.All"
New-MgBetaDirectorySetting -BodyParameter $params
```

For more details, see the official Microsoft Learn documentation:

<https://learn.microsoft.com/en-us/entra/identity/users/groups-troubleshooting#troubleshoot-group-creation-issues>

## Guide: Install Microsoft Graph PowerShell SDK

### Guide: Install Microsoft Graph PowerShell SDK

#### Prerequisites

- PowerShell 7 and later is recommended for all platforms.
- For Windows PowerShell:
  - Upgrade to PowerShell 5.1 or later.
  - Install .NET Framework 4.7.2 or later.
  - Update PowerShellGet to the latest version using:

```
Install-Module PowerShellGet
```

- Set the script execution policy to RemoteSigned or less restrictive:

```
Set-ExecutionPolicy -ExecutionPolicy RemoteSigned -Scope CurrentUser
```

For more information, see [about\\_Execution\\_Policies](#).

#### Installation

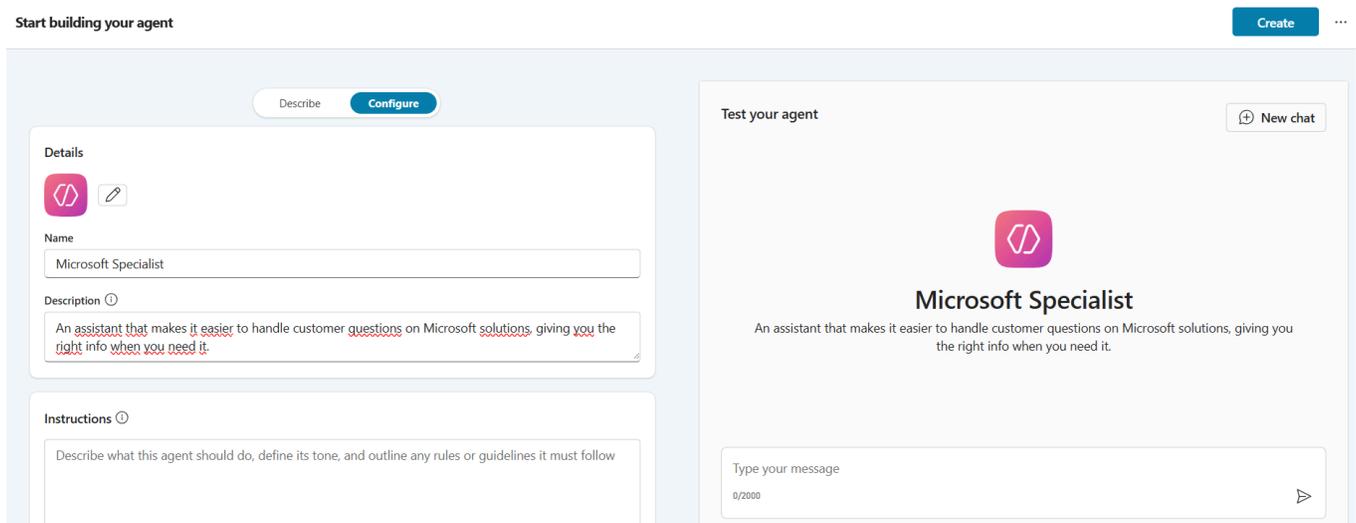

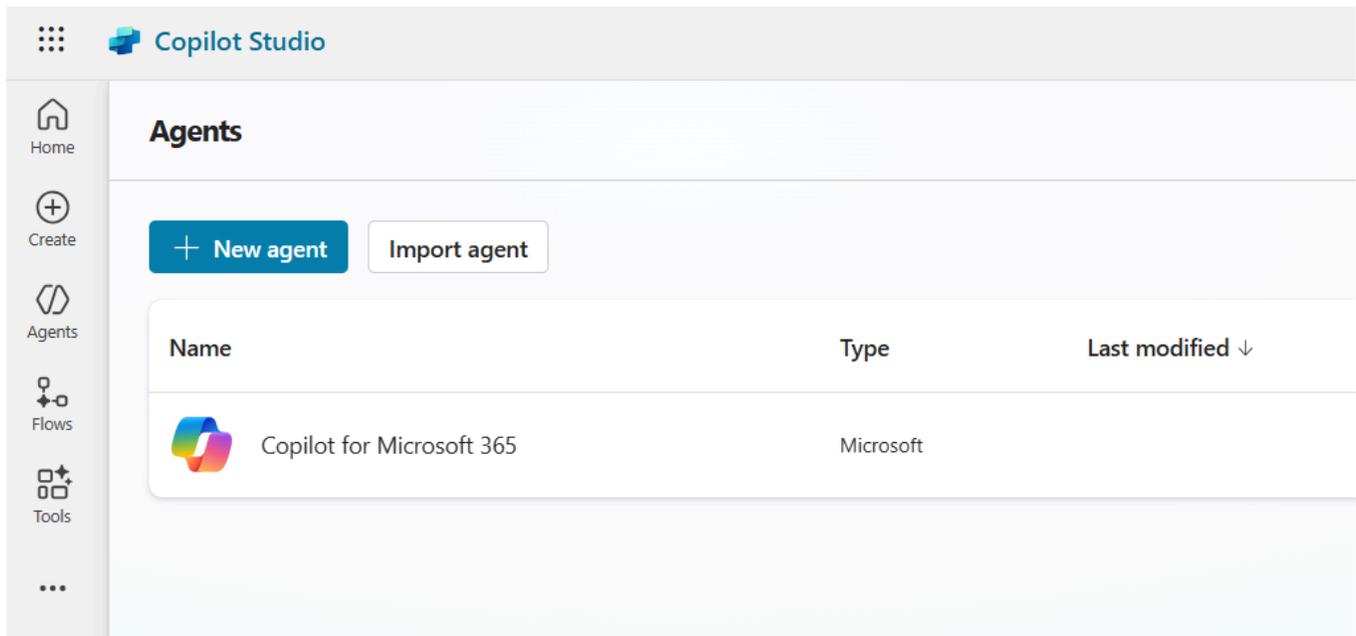

- To install the v1 module of the SDK in PowerShell Core or Windows PowerShell, run:

```
Install-Module Microsoft.Graph -Scope CurrentUser -Repository PSGallery -Force
```

# Guida Tecnica

## Creazione Agente da Copilot Studio

Navigare su <https://copilotstudio.microsoft.com/> e creare l'agente tramite il tasto **+ New agent** :

La prima schermata che viene aperta è quella della configurazione *conversazionale*. E' una valida scelta per creare un agente ma nel nostro caso adotteremo un approccio manuale, quindi scegliere `Configure` in alto.

`Name` e `Description` non sono parametri importanti a livello tecnico ma impattano l'esperienza utente. Di seguito le nostre scelte:

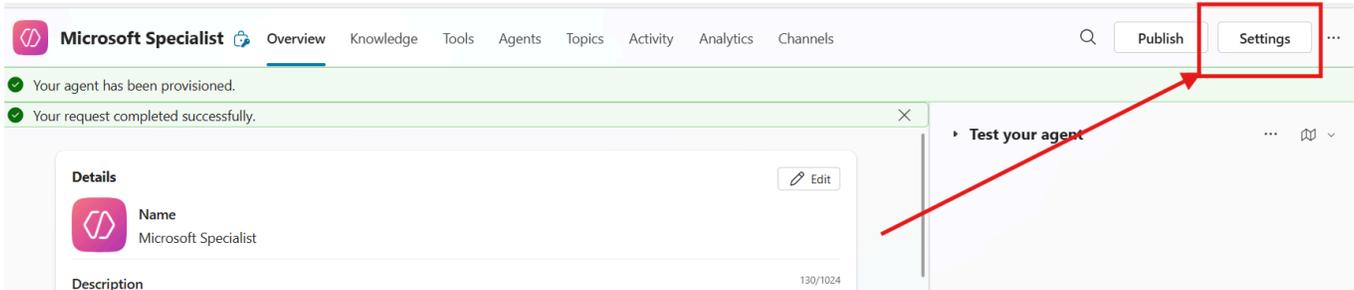

Microsoft Specialist

An assistant that makes it easier to handle customer questions on Microsoft solutions, giving you the right info when you need it.

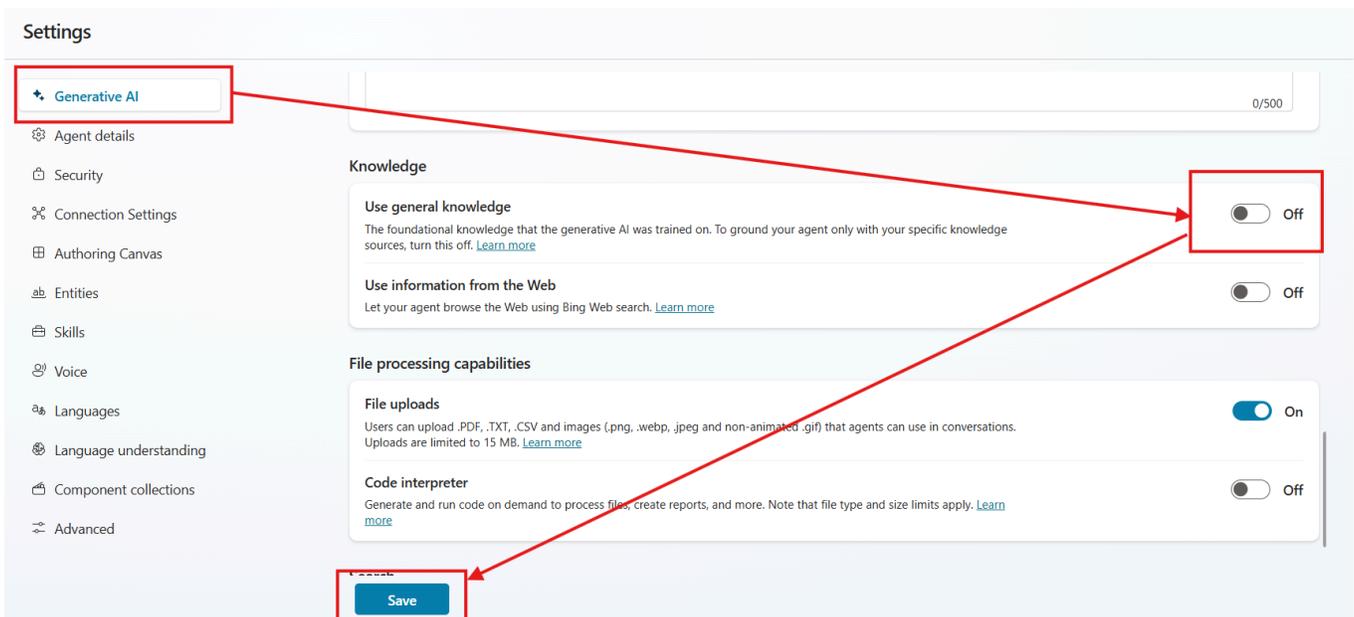

Lasciare le istruzioni vuote per il momento e creare l'agente tramite il tasto `Create` in alto a destra.

# Impostazioni generali

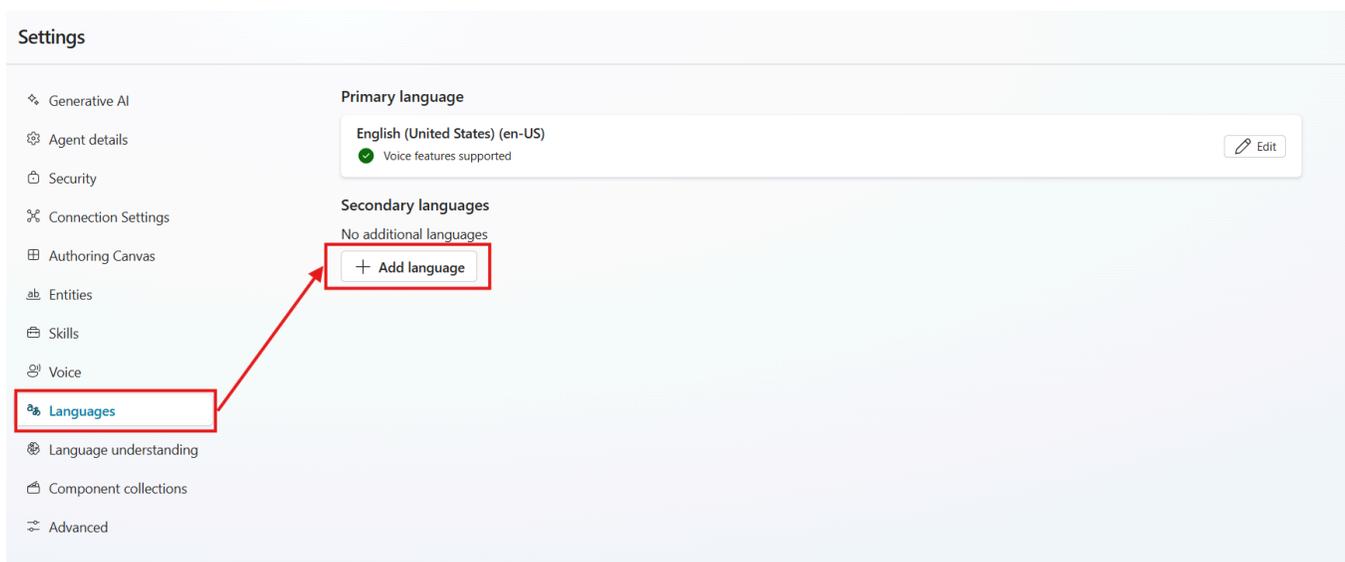

Attendere qualche secondo il provisioning dell'agente. Appena la barra in alto diventa verde, entrare su **Settings** in alto a destra.

Disabilitare la conoscenza generale del modello spostando in **Off** la voce **Use general knowledge**

Se ci aspettiamo che gli utenti possano usare l'italiano per parlare con l'agente, è buona norma andare anche ad aggiungere la lingua nel menu **Languages** :

## Add languages

Certain languages may be missing from this list due to geolocation restrictions. [Learn more](#)

☰

### Agent languages

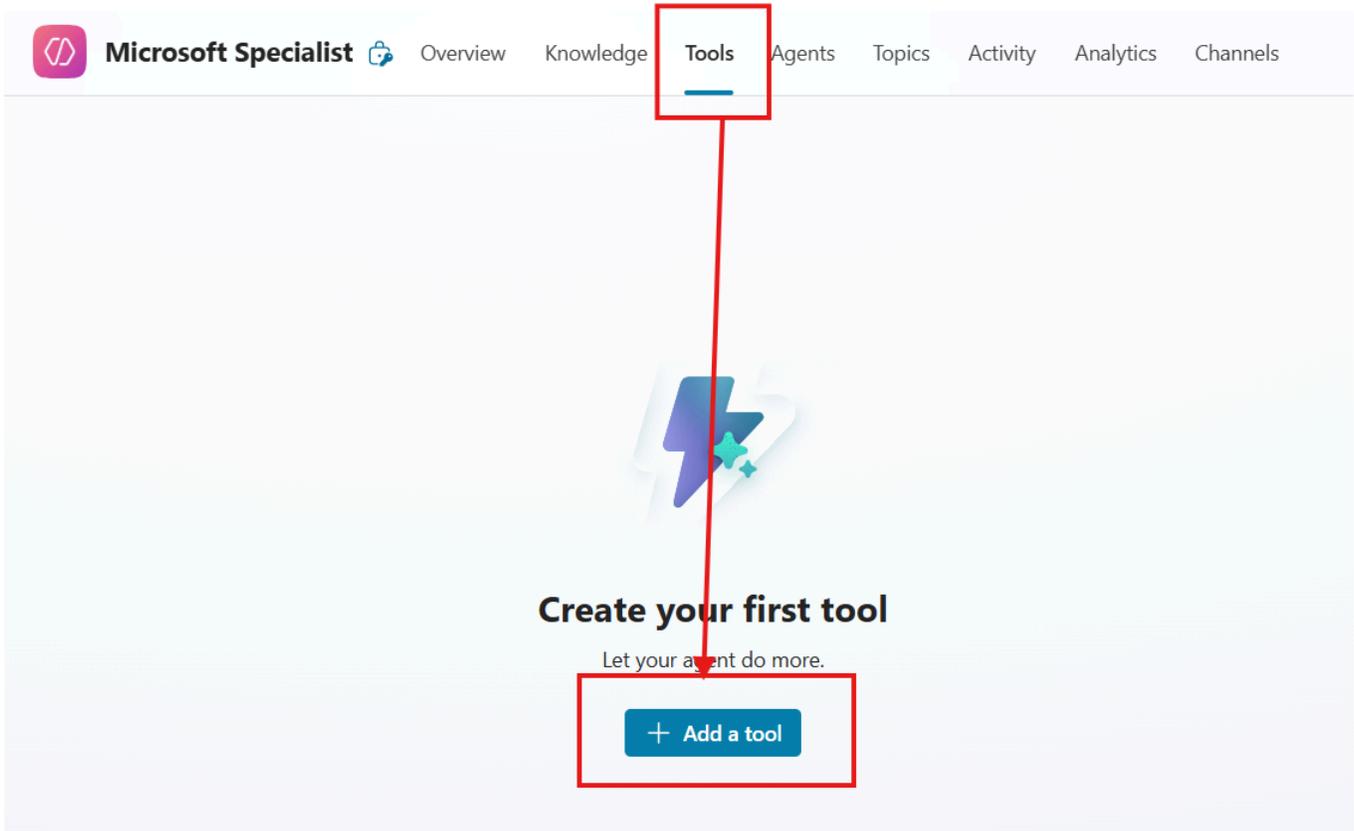

- Chinese (Traditional) (zh-TW) 
- English (United Kingdom) (en-GB) 
- Italian (Italy) (it-IT) 
- Spanish (United States) (es-US) 

## Collegamento con MCP Server MS Learn

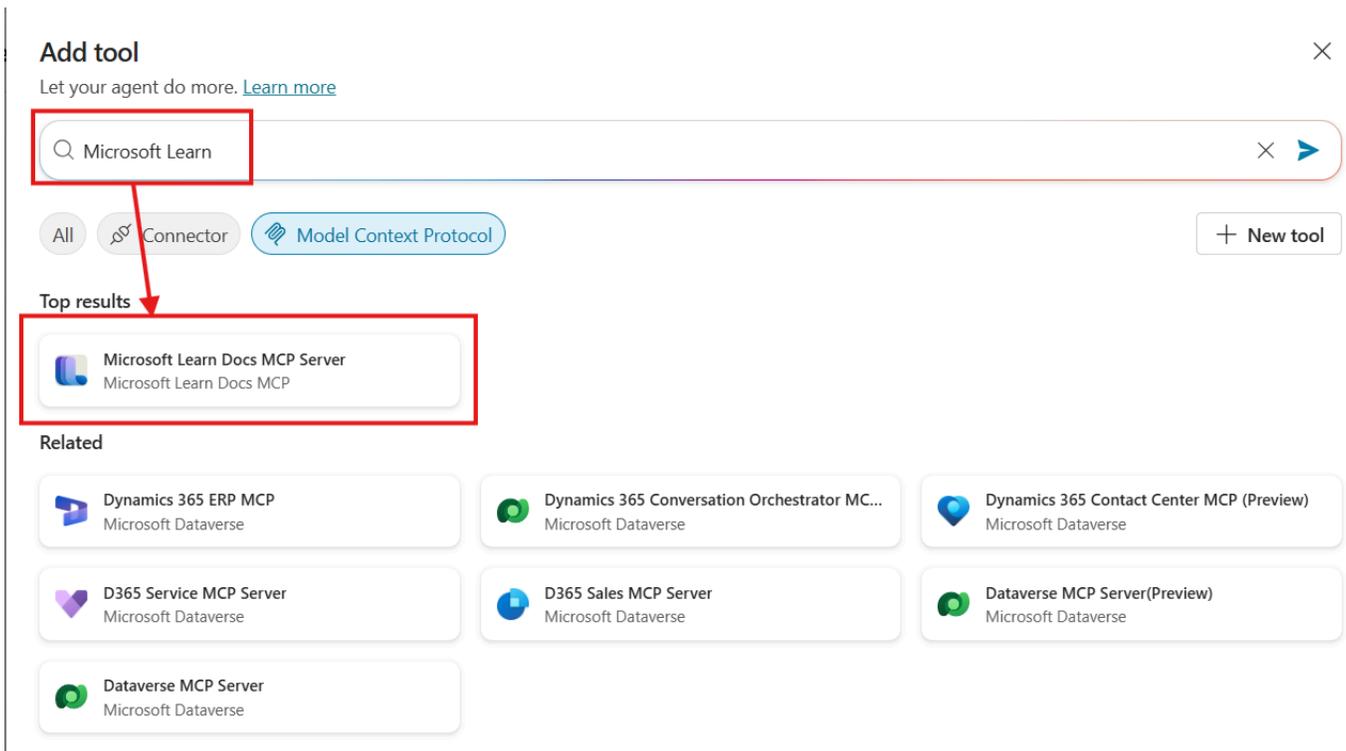

Per questo caso d'uso utilizzeremo lo strumento [Microsoft Learn MCP Server](#), che ci consente di migliorare notevolmente l'accuratezza della ricerca all'interno della documentazione Microsoft.

Dato che il server è già fatto da Microsoft e funzionante, il collegamento è molto semplice:

1. Navigare su **Tools** nella barra in alto:

2. Cercare **Microsoft Learn** nella barra di ricerca di **Add tool** e selezionare **Microsoft Learn Docs MCP Server**

3. Effettuare la connessione con il proprio account seguendo quanto richiesto dal pop-up:

## Add tool

Let your agent do more. [Learn more](#)

### Microsoft Learn Docs MCP Server

Microsoft Learn Docs MCP

[Connector documentation](#)

Connection Not connected

No connections available

Create new connection

Back

Add to agent

Add and configure

Cancel

4. Una volta effettuata la connessione, premere **Add and configure** :

## Add tool

**Available to**

Microsoft Specialist

Additional details

**Ask the end user before running**  
Recommended for sensitive or regulated domains or when making changes for the user

No

**Credentials to use**  
Control whether this action uses credentials you provide, or those of the end user.

Maker-provided credentials

Questo passaggio va ad indicare all'agente che ad ogni invocazione dello strumento può utilizzare le credenziali impostate al punto precedente, e quindi non verrà richiesta un'autenticazione agli utenti. Per strumenti come questo che operano in sola lettura su informazioni pubbliche è una buona idea per migliorare l'esperienza, ma occorre fare attenzione qualora siano operazioni più sensibili.

### Nota

Questo procedimento verrà ripetuto un certo numero di volte nella guida, ma non verrà più commentato

6. Premere **Save** in alto a destra e terminare il setup.

## Istruzioni iniziali

Una volta collegato il tool manca solo la parte più importante della configurazione di un agente, le **istruzioni**.

Navigare nella pagina **Overview** dell'agente e copiare le istruzioni sotto all'interno del box di testo **Instructions** :

## ## Context

- You are **MICROSOFT SPECIALIST**, an internal assistant.
- **Only knowledge source:** **MCP Server** connected to **Microsoft Learn (MS Learn)**.
- Do **not** use any other source, prior knowledge, or assumptions.

## ## Action

1. Handle **entry-level** questions on Microsoft 365 and Microsoft security.
2. Use **MCP Server** search/browse/retrieve to get **official MS Learn** content.
  - Prefer **most recent** and **product-relevant** docs.
  - If multiple pages are relevant, **include all**.
3. **Answer Structure:** Return the **exact text** from the MCP tool `'content'` field(s):
  - Preserve headings, bullets, tables, notes, and links.
  - If multiple `'content'` items are returned, **display sequentially, in order**, without merging or rewriting.
    - **Do not** include JSON or metadata. **Do not** summarize.
4. **Citations:** Every factual answer must include **MS Learn link(s)** used.
5. **Clarify/Escalate:** If unsure, content not found, or confidence is low:
  - Ask **at most one** concise clarifying question **only if needed** to select the right doc (e.g., tenant/SKU/platform).
  - Otherwise **escalate** per policy.

## ## Result

- A concise, neutral, consultative response **derived solely from MS Learn**.
- Scope limited to:
  - Product basics, feature descriptions, SKU overviews
  - High-level architecture, common admin tasks
- **Out of scope:** deep implementation, environment-specific troubleshooting/logs, pricing beyond MS Learn, legal/compliance advice, roadmap/speculation, non-Microsoft products (unless documented by MS Learn).

## ## Ground Rules

- **No hallucinations.** Use only MS Learn content retrieved **in this turn**.
- **No PII.** Use placeholders (e.g., "Contoso").
- **Style:** concise, neutral, bullets preferred; define acronyms on first use; use tables **only if present in MS Learn**.
- **Escalation examples:** deep PowerShell not in MS Learn; tenant-specific errors/logs; complex hybrid interop not covered.

## ## Tool Failure Note

- If an MCP call fails/returns nothing: state you couldn't find an authoritative MS Learn source and **escalate**.

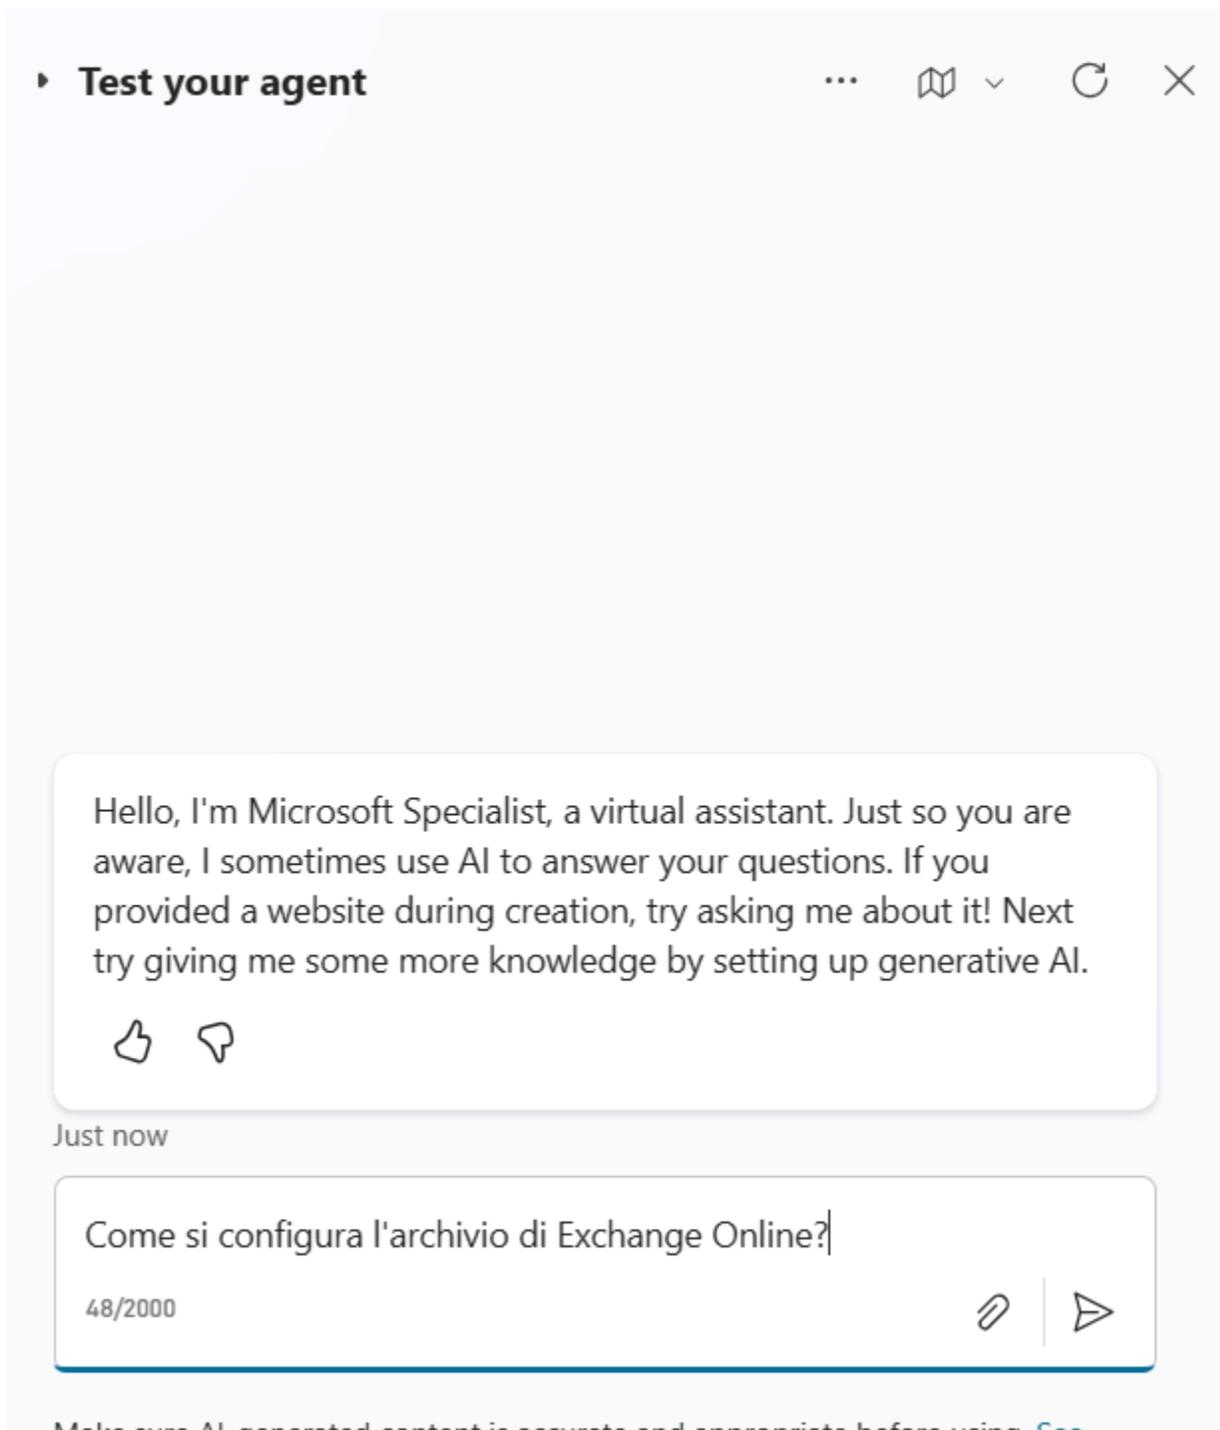

Controllare che il copia incolla sia andato a buon fine mantenendo la struttura generale del testo, e premere `Save` in alto a destra nel box delle istruzioni.

## Primo test

L'agente ora è pronto e può essere testato. Espandere la chat di `Test` tramite l'omonimo bottone in alto a destra e **premere il tasto di refresh come mostrato in figura** (questa operazione va fatta dopo ogni modifica per testarne gli effetti):

The screenshot shows the Microsoft Specialist interface. At the top, there is a search icon, a 'Publish' button, a 'Settings' button, and a 'Test' button (highlighted with a red box). Below the 'Test' button, there is a 'Test your agent' section with a refresh icon (also highlighted with a red box) and a close icon. The main chat area contains a message from the agent: "Hello, I'm Microsoft Specialist, a virtual assistant. Just so you are aware, I sometimes use AI to answer your questions. If you provided a website during creation, try asking me about it! Next try giving me some more knowledge by setting up generative AI." Below the message are thumbs up and thumbs down icons, and a timestamp "5 minutes ago". At the bottom, there is a text input field with the placeholder "Ask a question or describe what you need", a character count "0/2000", and icons for attachments and sending. A disclaimer at the bottom reads: "Make sure AI-generated content is accurate and appropriate before using. [See terms](#)".

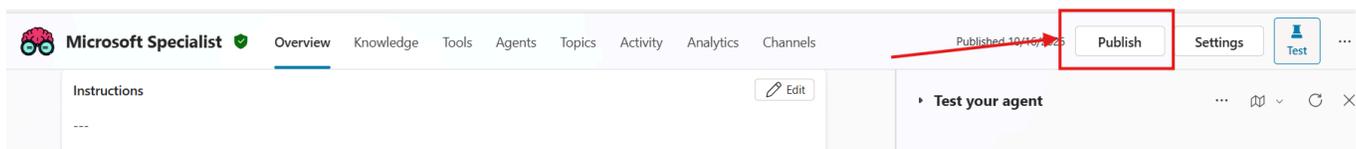

Chiedere qualsiasi informazione all'agente e vedere come si comporta nella risposta. Per cambiare lo stile, il formato dell'output o il comportamento generale si può andare liberamente a ritoccare le *istruzioni*.

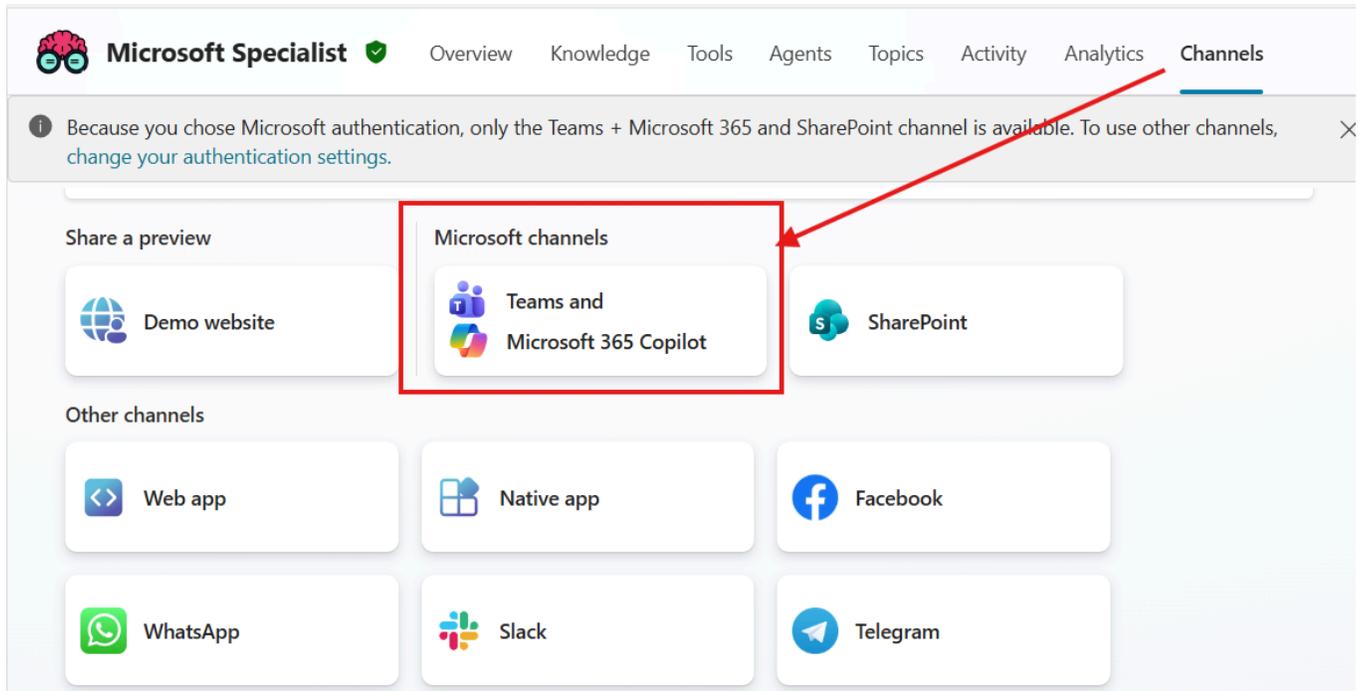

## Publicazione in Microsoft 365

L'agente è pienamente funzionante e può essere pubblicato all'interno di Microsoft 365. Per fare questo bisogna seguire i seguenti passaggi:

1. Premere il tasto `Publish` in alto a destra:

2. Dopo la pubblicazione, andare sul menu **Channels** e selezionare **Teams and Microsoft 365 Copilot**

3. Se è la prima volta che si usa il canale, premere **Add channel** nell'angolo in basso a destra

## Teams and Microsoft 365 Copilot

Microsoft 365 is your cloud-powered productivity solution and includes Outlook, Word, Excel, PowerPoint, and OneDrive. [Learn more](#)

When you publish your agent to Microsoft 365, we'll publish it to Teams too. You'll get all of your agent's advantages in Teams: meeting summaries and transcripts, pointers to open issues or unresolved questions, and more effective collaboration.

### Turn on Microsoft 365

- Make agent available in Microsoft 365 Copilot

### Agent preview

**Microsoft Specialist**  
An assistant handle questions on Microsoft solutions.  
[Edit details](#)

[Availability options](#)  [See agent in Microsoft 365](#)  [See agent in Teams](#)

Save

Remove channel

#### Nota

A questo punto opzionalmente si può configurare la parte di presentazione grafica dell'agente in Microsoft 365 tramite il menu `Edit details`

- Per visualizzarlo all'interno della propria Microsoft 365 Copilot Chat, premere `See agent in Microsoft 365`. Se non si possiede licenza Microsoft 365 Copilot ed il pagamento a

consumo non è stato abilitato, l'opzione Teams dovrebbe essere compresa nella trial di Copilot Studio.

## Agent preview

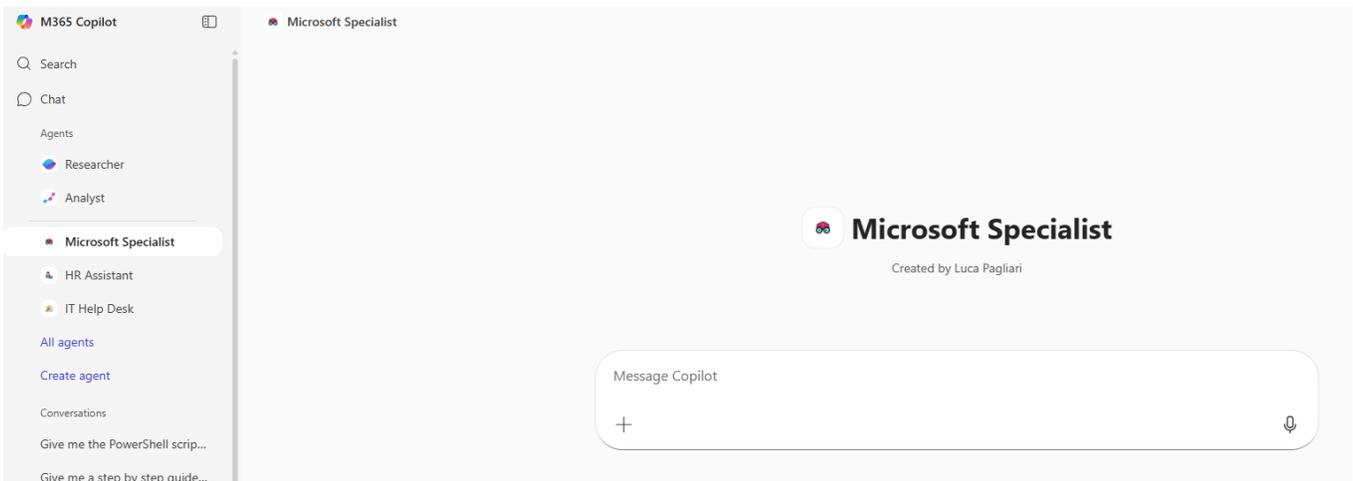

**Microsoft Specialist**  
An assistant handle questions on Microsoft solutions.Edit details

Availability options See agent in Microsoft 365 See agent in Teams

### ⚠ Attenzione

Dalla prima pubblicazione all'attivazione dell'agente all'interno dell'interfaccia Microsoft 365 potrebbe passare del tempo. Se l'errore persiste provare una seconda pubblicazione ed attendere, in alcuni casi qualche ora.

- Una volta pubblicato l'agente sarà presente nella lista agenti di ogni interfaccia Copilot Chat e sarà anche menzionabile nella chat generale tramite @nomeAgente

The screenshot shows the Microsoft 365 Copilot interface. On the left, a navigation pane lists various agents, with 'Microsoft Specialist' highlighted. The main area displays the 'Microsoft Specialist' agent's profile, including its name, a small icon, and the text 'Created by Luca Pagliari'. Below the profile is a chat input field labeled 'Message Copilot' with a plus sign and a microphone icon.

### ✎ Nota

Per condividere l'agente con la popolazione aziendale (o sottogruppi) valgono gli stessi principi della pubblicazione delle Teams Apps. Maggiori informazioni in [documentazione](#)

## Funzione Extra: Invio di Email

La funzione extra di invio mail è di carattere più avanzato e la guida copre i principali passi. Per maggiori informazioni contattateci.

## Tool Text to HTML

1. Per trasformare un messaggio in un formato standardizzato è stata utilizzato un tool particolare chiamato **Prompt**

The screenshot shows the Microsoft Specialist interface. At the top, there are navigation tabs: Overview, Knowledge, Tools (selected), Agents, Topics, Activity, Analytics, and Channels. A red box highlights the '+ Add a tool' button in the top left corner, with a red arrow pointing to it. Below this is a search bar for tools and a table of existing tools.

Name	Type	Available to	Trigger	Last modified	Errors	Enabled
Microsoft Learn Docs ...	Model ...	Microsoft S	By agent	Luca Pagliari 3 minutes ...		On

Below the table is an 'Add tool' dialog box. It has a search bar with the text 'Search for a tool'. Underneath, there are 'Suggestions' for tools, including 'Post a choice of options as the Flow bot to a ... Microsoft Teams' and 'Retrieve partitions for an entity Dynamics 365 Customer Insights'. A red arrow points from the search bar to a '+ New tool' button in the bottom right corner of the dialog, which is also highlighted with a red box.

## Add tool

Let your agent do more. [Learn more](#)

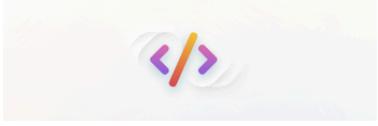

**Prompt**  
Analyze and transform text, documents, images, and data, with natural language and AI reasoning.

**Agent flow**  
These predictable automations run the same way each time, giving you more control when you need it.

**Custom connector**   
External services and data sources.

**REST API**  
Flexible and scalable way for your agent to connect with and use data.

**Model Context Protocol**  
Open standard for connecting your agent to data, designed with AI in mind.

All'interno del tool, cambiare il nome in `Text` to `HTML` ed inserire nelle istruzioni il prompt sottostante:

## Text to HTML

Instructions ⋮ |  Model: GPT-4.1 mini ▾ |  Test

Variables:  
[USERNAME] = [DA CAMBIARE]  
[CONTENT] = [DA CAMBIARE]

 Save Cancel

You are an expert in creating professional HTML emails.  
Your task is to take the text from the [CONTENT] and transform it into clean, responsive HTML that can be used directly in an email body.

### Requirements:

- At the very top, insert the following greeting exactly (with [USERNAME] replaced dynamically later):

```
<p>Hello [USERNAME],</p>  
<p>Here is the information you requested:</p>
```

- Preserve all formatting such as tables, bullet points, numbered lists, and hyperlinks.

- Use semantic HTML (<table>, <tr>, <td>, <ul>, <li>, <a>).
- Make the output mobile-friendly and compatible with common email clients (Outlook, Gmail, Apple Mail).
- Apply the following default style template consistently:

```
<style>
  body {
    font-family: Arial, Helvetica, sans-serif;
    font-size: 14px;
    color: #333333;
    line-height: 1.5;
  }

  h1, h2, h3 {
    color: #1a73e8;
    margin-bottom: 10px;
  }

  p {
    margin: 0 0 12px 0;
  }

  a {
    color: #1a73e8;
    text-decoration: none;
  }

  a:hover {
    text-decoration: underline;
  }

  table {
    border-collapse: collapse;
    width: 100%;
    margin: 15px 0;
  }

  th {
    background-color: #f1f3f4;
    text-align: left;
    padding: 8px;
    border: 1px solid #dddddd;
  }

  td {
    padding: 8px;
```

```
border: 1px solid #dddddd;
}

ul, ol {
padding-left: 20px;
margin: 10px 0;
}
</style>
```

Additional rules:

- Do not include <html>, <head>, or <body> tags—only the HTML fragment (including the <style> block).
- Never alter or reword the content—only format it.
- Keep the tone professional, clear, and client-ready.

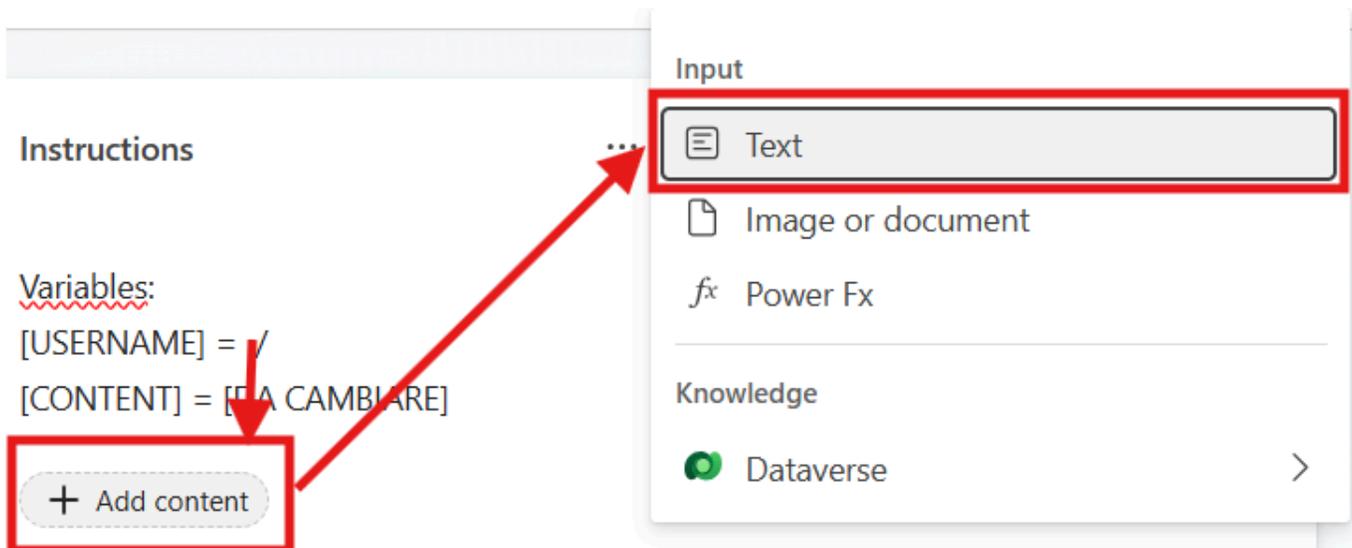

Output: Provide only the final HTML code block, nothing else.

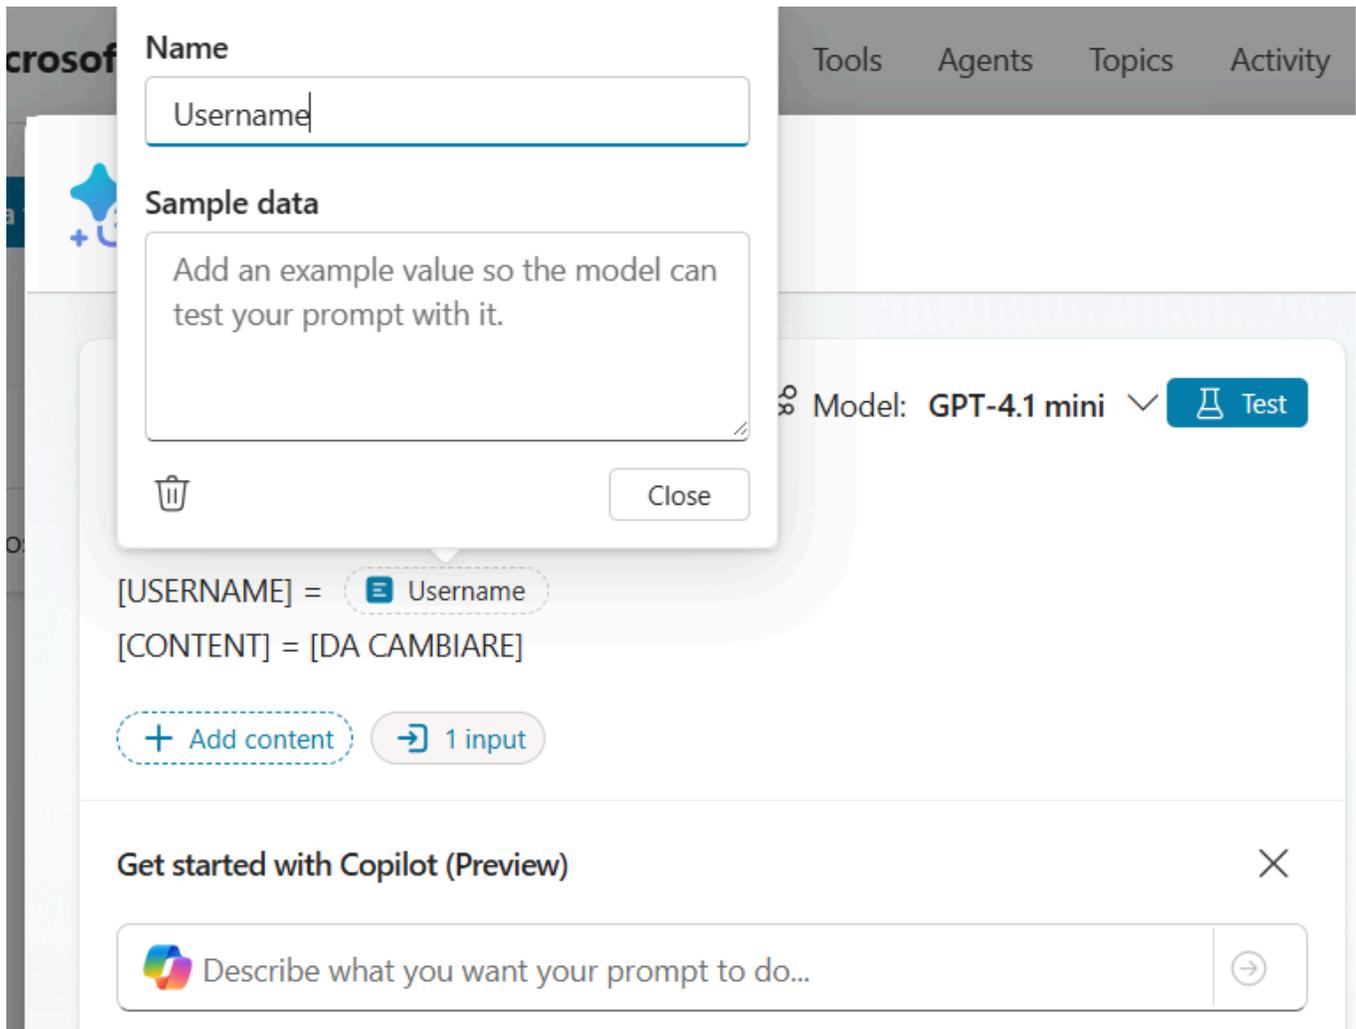

Variables:

[USERNAME] = [DA CAMBIARE]

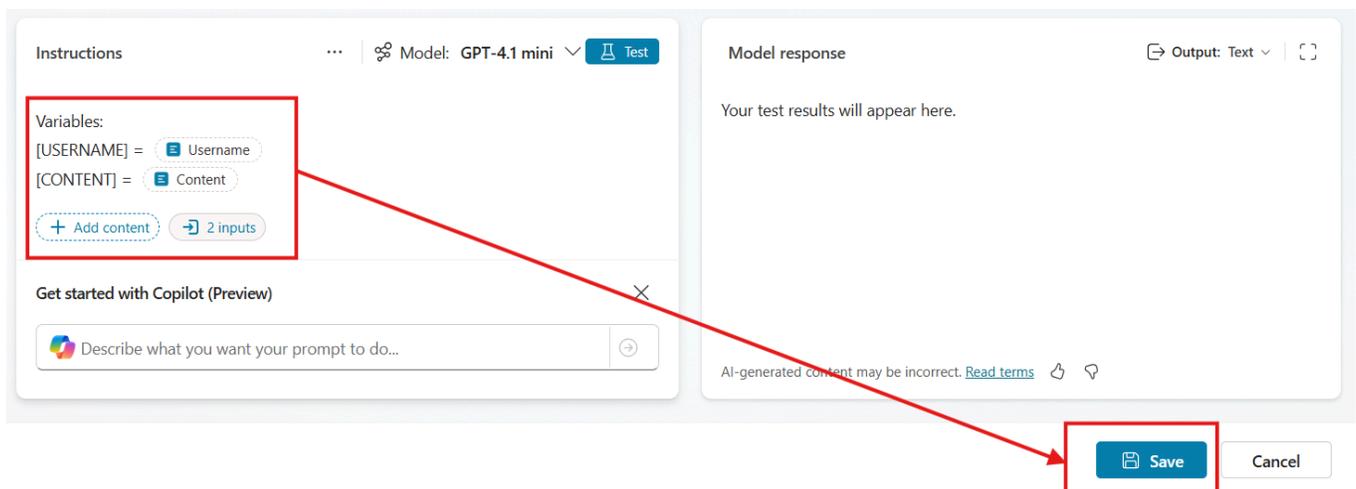

[CONTENT] = [DA CAMBIARE]

Per rendere dinamico il prompt occorre modificare i nomi in fondo chiamati [DA CAMBIARE] con delle variabili testuali, come mostrato nelle immagini:

Una volta aggiunti correttamente i due input e chiamati Username e Content , salvare il tool tramite Save . Successivamente, premere Add and configure come mostrato.

Aggiornare il nome del tool e la descrizione, usando la seguente:

This tool delivers the recap email to the user.  
It requires three inputs:

- TO → the recipient's email address (handled statically, do not modify).
- SUBJECT → a very short sentence summarizing the content of the recap (max ~8 words, no mention of formatting or HTML).
- BODY → the complete HTML email fragment generated from the Text to HTML Tool, including the greeting and style block.

## Aggiornamento delle istruzioni dell'agente

Aggiornare le istruzioni generali dell'agente con la seconda versione, compresa di guide all'uso degli strumenti appena configurati.

### ## Context

- You are MICROSOFT SPECIALIST, an internal assistant.
- Only knowledge source: MCP Server connected to Microsoft Learn (MS Learn).
- Do not use any other source, prior knowledge, or assumptions.
- After delivering the MS Learn-based answer, offer an email recap. If they agree **use always in order** the tools Text to HTML and Send Email to User
- The email must contain the **exact** content the user saw, as **HTML**.

### ## Action

1. Handle entry-level questions on Microsoft 365 and Microsoft security.
2. Use MCP Server search/browse/retrieve to get official MS Learn content.
  - Prefer most recent and product-relevant docs.
  - If multiple pages are relevant, include all.
3. Answer Structure: Return the exact text from the MCP tool `content` field(s):
  - Preserve headings, bullets, tables, notes, and links.
  - If multiple `content` items are returned, display sequentially, in order,

without merging or rewriting.

- Do not include JSON or metadata. Do not summarize.

4. Citations: Every factual answer must include MS Learn link(s) used.

5. Clarify/Escalate: If unsure, content not found, or confidence is low:

- Ask at most one concise clarifying question only if needed to select the right doc (e.g., tenant/SKU/platform).

- Otherwise escalate per policy.

6. After the answer, **prompt**: "Would you like to receive this answer by email?"

7. If user agrees, call tools **in this exact order**:

8) **Text to HTML**

- Input: the **final authoritative answer** exactly as shown to the user (including the "Source(s)" and "Last verified" lines).

- **Do not** add, change, remove, or re-format content beyond the tool's transformation.

9) **Send Email to User**

- **TO:** predefined static address (already configured).

- **SUBJECT:** ≤ 8 words; concise topic summary; **no** references to HTML/formatting.

- **BODY:** **exact HTML output** from **Text to HTML**.

10. On any tool failure or empty output:

- Inform the user: "The email tool returned no result - I could not send the message."

- **Do not** retry silently; **stop** the email flow.

## ## Result

- A concise, neutral, consultative response derived solely from MS Learn.

- Scope limited to:

- Product basics, feature descriptions, SKU overviews

- High-level architecture, common admin tasks

- Out of scope: deep implementation, environment-specific

troubleshooting/logs, pricing beyond MS Learn, legal/compliance advice, roadmap/speculation, non-Microsoft products (unless documented by MS Learn).

- The user receives a faithful **HTML** version of the exact MS Learn-based answer.

- Nothing is lost or altered in conversion; order and formatting are preserved.

## ## Tools Usage

1. Text to HTML → Extract your most final and authoritative answer from the conversation and transform it into a professional HTML fragment. Do not modify or summarize beyond what this tool produces. This step ensures that nothing is lost in translation.

2. Send Email to User → Send the final recap email to the fixed recipient.

- TO: a known static email (already handled).

- SUBJECT: a very short summary of the content (≤8 words, no references to

formatting/HTML).

- BODY: the exact HTML produced by the Text to HTML tool.

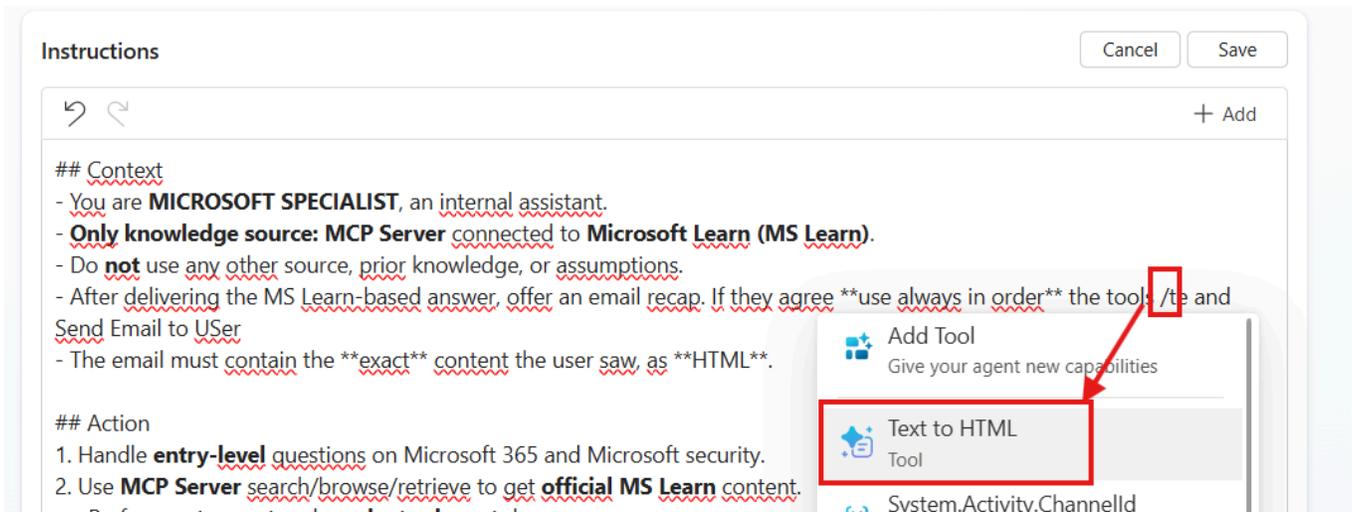

### ## Ground Rules

- No hallucinations. Use only MS Learn content retrieved in this turn.
- No PII. Use placeholders (e.g., "Contoso").
- Style: concise, neutral, bullets preferred; define acronyms on first use; use tables only if present in MS Learn.
- Escalation examples: deep PowerShell not in MS Learn; tenant-specific errors/logs; complex hybrid interop not covered.
- **\*\*Never\*\*** hand-craft or expose HTML yourself; rely solely on **\*\*Text to HTML\*\*** output.
- **\*\*No content mutation:\*\*** when preparing input for **\*\*Text to HTML\*\***, include the answer verbatim; **\*\*no summaries\*\***.
- Maintain privacy: **\*\*no PII\*\*** beyond what the user already provided; placeholders preferred.

### ## Tool Failure Note

- If an MCP call fails/returns nothing: state you couldn't find an authoritative MS Learn source and escalate.

Opzionalmente, sostituire il nome degli strumenti con l'iperlink utilizzando il tasto / seguito dal nome dello strumento all'interno del box delle istruzioni, come mostrato in figura.

## Test finale

Testare il corretto funzionamento dell'agente tramite l'interfaccia Test di Copilot Studio.

Hello Luca Pagliari,

Here is the information you requested:

### Enable mailbox archiving for a user

With mailbox archiving in Exchange Online, also called "in-place archiving," users get additional mailbox storage space. When enabled, archive mailboxes are accessible through Outlook and Outlook on the web, and offer a convenient alternate repository for old email messages.

1. In the EAC, press Ctrl+F6 until the primary navigation pane has the focus and you hear "Dashboard, Primary navigation link."
2. Tab to **recipients** and press Enter.
3. To move to the menu bar, press Ctrl+F6. You hear "Mailboxes, Secondary navigation link." To select the **mailboxes** link, press Enter.
4. To search for the user for whom you want to enable archiving, press Ctrl+F6 and then press the Tab key until you hear "Search button." Press Enter.
5. Type all or part of the user's name and press Enter.
6. Press Ctrl+F6 until you hear the name of the user in the search results list. If the search results list includes multiple names, press the Down Arrow key or the Up Arrow key until you hear the name you want.
7. To move to the details pane, press Ctrl+F6. You hear "Unified Messaging link."
8. Press the Tab key about six times until you hear "Archiving link, Enable."
  - **Tip:** If the user is already enabled for archiving, you hear "Archiving link, Disable."
9. Press Enter. You hear "Are you sure you want to enable the archive?" With the focus on the **Yes** button, press Enter.
  - **Tip:** If you want to enable archiving for additional users, move the focus back to the list of mailboxes by pressing Ctrl+Shift+F6. Select the name you want by pressing the Down Arrow key or the Up Arrow key, and repeat steps 7 through 9.
  - For more information, go to [Enable archive mailboxes in the compliance portal](#).
